<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

Tutorials

Add WeChat powcoder

- Time & Place: Tue 5-6pm, Zoom

- Details

- Delivered live by TAs
- Problem sets will be posted early on the course webpage
 - Easier problems that are warm-up to assignments/exams
- Please try them before coming to the tutorials
- TAs will explain the problems, allow you to discuss them in breakout rooms, and then go over key parts of the solutions
- Solutions will be posted later on the course webpage

Assignment Project Exam Help

Tutorials

Add WeChat powcoder

- Further details

- Each section is divided into three parts (A,B,C)

Assignment Project Exam Help

- Students divided by birth month: A = Jan-Apr, B = May-Aug, C = Sep-Dec

<https://powcoder.com>

- Feel free to attend a different tutorial than the one you're assigned

Add WeChat powcoder

- EXCEPT when the tutorial slot is being used for a test

- If the attendance is low, the number of tutorials per section may be reduced

Assignment Project Exam Help

Office Hours

Add WeChat powcoder

- **Time & Place:** Wed 4-5pm, Fri 10-11am, Zoom
 - Do you have conflicts with these slots? **Poll!**

- **Details**

Assignment Project Exam Help

- I will conduct them <https://powcoder.com>
- Use the “raise hand” feature
- I will call upon the raised hands in order
- When called upon, unmute and ask the question
- Always phrase your question in a way that doesn’t give away your solutions or approach to an assignment problem
 - Just like in a physical office

Add WeChat powcoder

Tests

Add WeChat powcoder

- 2 term tests, one end-of-term test (final exam)
- **Time & Place:** Tue 5-6pm (tutorial slot)
 - Need to be able to attend live!
 - I'm considering using part of the Tue 4-5pm lecture slot to give you more time
- **Tentative Plan**
 - Open book, closed internet
 - You may be asked to join a zoom link and keep your video on
 - If you have a question, you can “raise hand”, and I or a TA can take you to a breakout room to answer your question
 - Upload scanned answer sheet at the end (we'll do a mock run of this)

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignments

Add WeChat powcoder

- 4 assignments, best 3 out of 4
- Group work
 - In groups of up to three students
 - Best way to learn is for each member to try each problem
- Questions will be more difficult
 - May need to mull them over for several days; do *not* expect to start and finish the assignment on the same day!
 - May include bonus questions
- Submission on MarkUs, more details later
 - May need to compress the PDF

Muhammad ibn Musa al-Khwarizmi
c. 780 – c. 850

What is this course about?

Add WeChat powcoder

- Algorithms

- Ubiquitous in the real world

- From your smartphone to self-driving cars
 - From graph problems to graphics problems
 - ...

Assignment Project Exam Help

<https://powcoder.com>

- Important to be able to design and analyze algorithms

Add WeChat powcoder

- For some problems, good algorithms are hard to find

- For some of these problems, we can formally establish complexity results
 - We'll often find that one problem is easy, but its minor variants are suddenly hard

What is this course about?

Add WeChat powcoder

- Algorithms

- Algorithms in specialized environments or using advanced techniques
 - Distributed, parallel, streaming, sublinear time, spectral, genetic...
- Other concerns with algorithms
 - Fairness, ethics, ...
- ...mostly beyond the scope of this course

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

What is this course about?

Add WeChat powcoder

- Topics in this course

- Divide and Conquer
- Greedy
- Dynamic programming
- Network flow
- Linear programming
- NP-completeness (not really an algorithm design paradigm)
- Approximation algorithms (if time permits)
- Randomized algorithms (if time permits)

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

What is this course about?

Add WeChat powcoder

- How do we know which paradigm is right for a given problem?
 - A very interesting question!
 - Subject of much ongoing research.
 - Sometimes, you just know it when you see it...
- How do we analyze an algorithm?
 - Proof of correctness
 - Proof of running time
 - We'll try to prove the algorithm is *efficient* in the *worst case*
 - In practice, average case matters just as much (or even more)

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

What is this course about?

Add WeChat powcoder

- What does it mean for an algorithm to be efficient in the worst case?
 - Polynomial time
 - It should use at most $\text{poly}(n)$ steps on any n -bit input
 - $n, n^2, n^{100}, 100n^6 + 237n^2 + 432, \dots$
 - If the input to an algorithm is a number x , the number of bits of input is $\log x$
 - This is because it takes $\log x$ bits to represent the input in binary
 - So the running time should be polynomial in $\log x$, not in x
 - How much is too much?

 - Write “yes”/”no” in chat

Assignment Project Exam Help

Divide & Conquer

Add WeChat powcoder

- General framework

- Break (a large chunk of) a problem into two smaller subproblems of the same type
- Solve each subproblem recursively and independently
- At the end, quickly combine solutions from the two subproblems and/or solve any remaining part of the original problem

Assignment Project Exam Help
<https://powcoder.com>
Add WeChat powcoder

- Hard to formally define when a given algorithm is divide-and-conquer...
- Let's see some examples!

Assignment Project Exam Help

Master Theorem

Add WeChat powcoder

- Here's the master theorem, as it appears in CLRS
 - Useful for analyzing divide-and-conquer running time
 - If you haven't already seen it, please spend some time understanding it

Theorem 4.1 (Master theorem)

Let $a \geq 1$ and $b > 1$ be constants, let $f(n)$ be a function, and let $T(n)$ be defined on the nonnegative integers by the recurrence

$$T(n) = aT(n/b) + f(n),$$

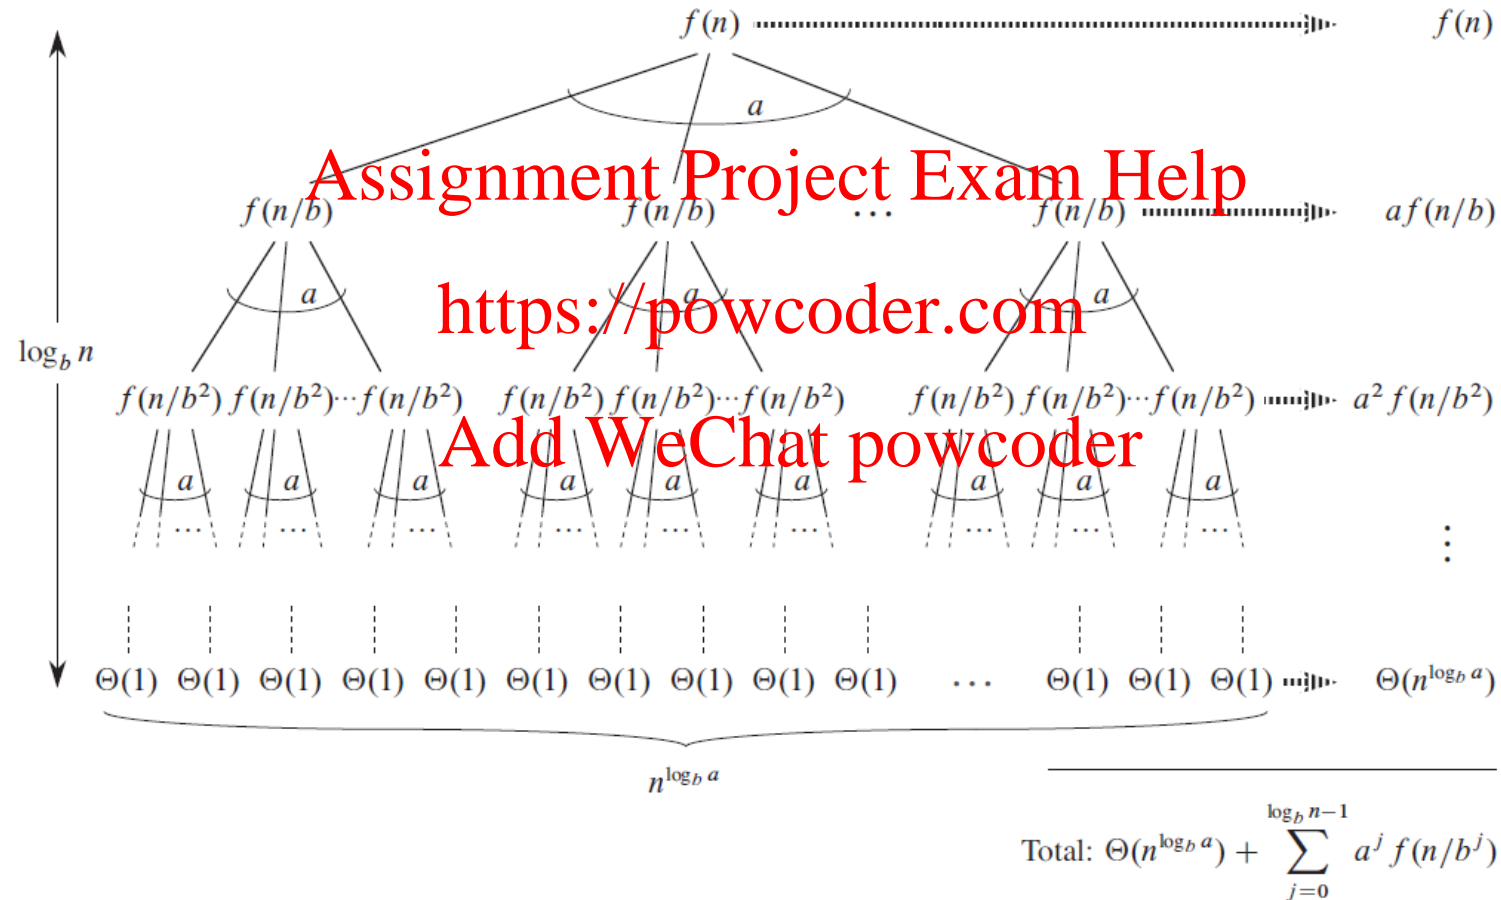

where we interpret n/b to mean either $\lfloor n/b \rfloor$ or $\lceil n/b \rceil$. Then $T(n)$ has the following asymptotic bounds:

1. If $f(n) = O(n^{\log_b a - \epsilon})$ for some constant $\epsilon > 0$, then $T(n) = \Theta(n^{\log_b a})$.
2. If $f(n) = \Theta(n^{\log_b a})$, then $T(n) = \Theta(n^{\log_b a} \lg n)$.
3. If $f(n) = \Omega(n^{\log_b a + \epsilon})$ for some constant $\epsilon > 0$, and if $af(n/b) \leq cf(n)$ for some constant $c < 1$ and all sufficiently large n , then $T(n) = \Theta(f(n))$. ■

Master Theorem

Add WeChat powcoder

Intuition: Compare $f(n)$ with $n^{\log_b a}$. The larger determines the recurrence solution.

output $1 + 3 + 13 = 17$

Assignment Project Exam Help

Counting Inversions

Add WeChat powcoder

Q. How to count inversions (a, b) with $a \in A$ and $b \in B$?

A. Easy if A and B are sorted!

Count inversions (a, b) with $a \in A$ and $b \in B$, assuming A and B are sorted.

- Scan A and B from left to right.
- Compare a_i and b_j .
- If $a_i < b_j$, then a_i is not inverted with any element left in B .
- If $a_i > b_j$, then b_j is inverted with every element left in A .
- Append smaller element to sorted list C .

Add WeChat powcoder

count inversions (a, b) with $a \in A$ and $b \in B$

merge to form sorted list C

Assignment Project Exam Help

Counting Inversions

Add WeChat powcoder

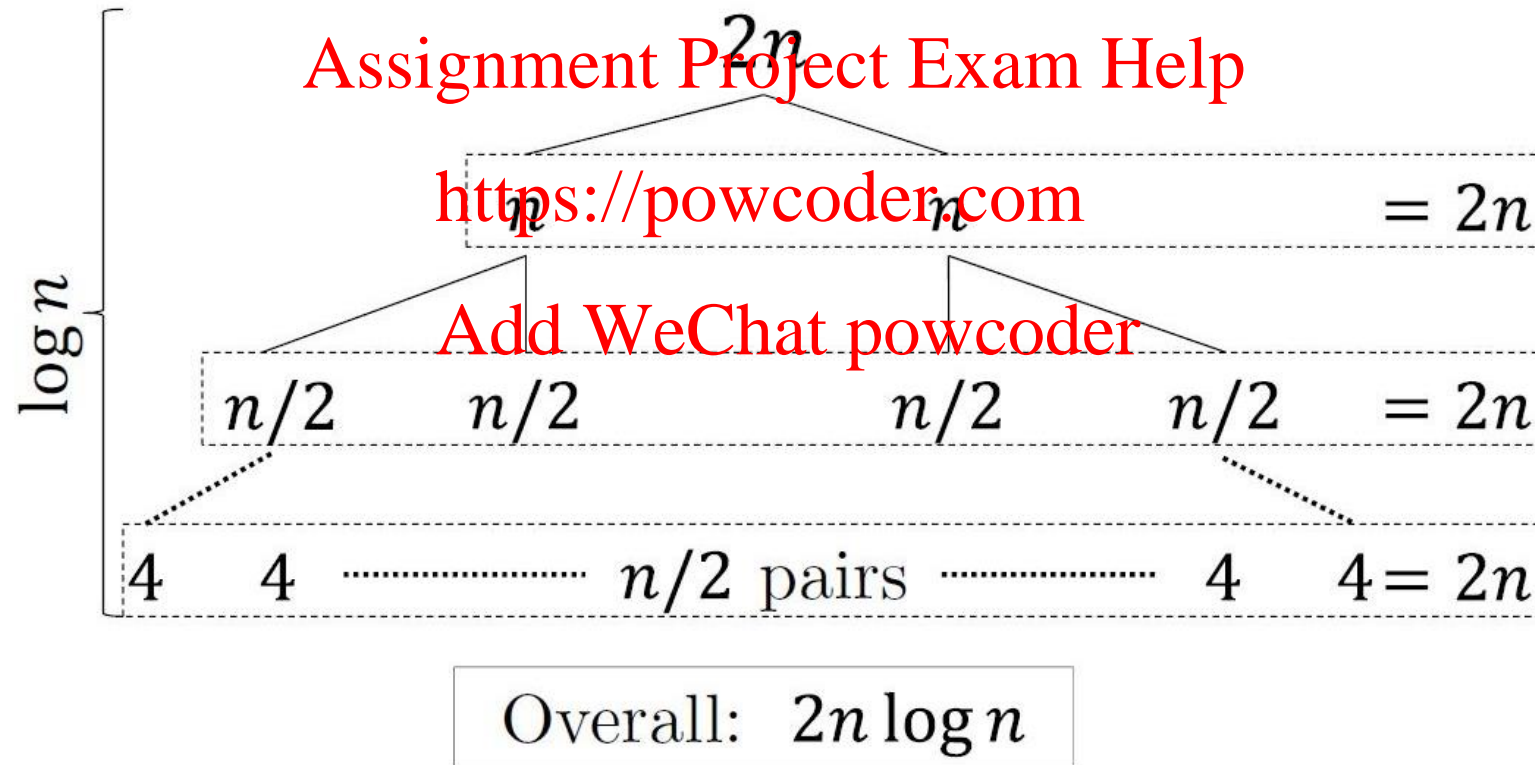

- How do we formally prove correctness?
 - Induction on n is usually very helpful
 - Allows you to assume correctness of subproblems
 - Running time analysis
 - Suppose $T(n)$ is the running time for input of size n
 - Our algorithm satisfies $T(n) = 2 T(n/2) + O(n)$
 - Master theorem says this is $T(n) = O(n \log n)$
- Assignment Project Exam Help
- <https://powcoder.com>
- Add WeChat powcoder

Assignment Project Exam Help

Without Master Theorem

Add WeChat powcoder

Let's say $T(n) = 2 T(n/2) + 2n$

Closest Pair in \mathbb{R}^2

Add WeChat powcoder

- Problem:

- Given n points of the form (x_i, y_i) in the plane, find the closest pair of points.

Assignment Project Exam Help

- Applications:

- Basic primitive in graphics and computer vision
- Geographic information systems, molecular modeling, air traffic control
- Special case of nearest neighbor

<https://powcoder.com>

Add WeChat powcoder

- Brute force: $\Theta(n^2)$

Intuition from 1D?

Add WeChat powcoder

- In 1D, the problem would be easily $O(n \log n)$
 - Sort and check!

Assignment Project Exam Help

- **Sorting attempt in 2D**

- Find closest points by x coordinate
- Find closest points by y coordinate

<https://powcoder.com>

Add WeChat powcoder

- **Non-degeneracy assumption**

- No two points have the same x or y coordinate

Assignment Project Exam Help

Intuition from 1D?

Add WeChat powcoder

- Sorting attempt in 2D
 - Find closest points by x or y coordinate
 - Doesn't work!

Assignment Project Exam Help

Assignment Project Exam Help

Closest Pair in \mathbb{R}^2

Add WeChat powcoder

- Let's try divide-and-conquer!
 - **Divide:** points in equal halves by drawing a vertical line L
 - **Conquer:** solve each half recursively
 - **Combine:** find closest pair with one point on each side of L
 - Return the best of 3 solutions
- Assignment Project Exam Help
<https://powcoder.com>

Seems like $\Omega(n^2)$ ☹

Closest Pair in \mathbb{R}^2

- Combine

- We can restrict our attention to points within δ of L on each side, where $\delta =$ best of the solutions in two halves

Assignment Project Exam Help

<https://powcoder.com>

Assignment Project Exam Help

Closest Pair in \mathbb{R}^2

Add WeChat powcoder

- Combine (let δ = best of solutions in two halves)
 - Only need to look at points within δ of L on each side,
 - Sort points on the strip by y coordinate
 - Only need to check each point with next 11 points in sorted list!

<https://powcoder.com>

Wait, what? Why 11?

Why 11?

Add WeChat powcoder

- Claim:

- If two points are at least 12 positions apart in the sorted list, their distance is at least δ

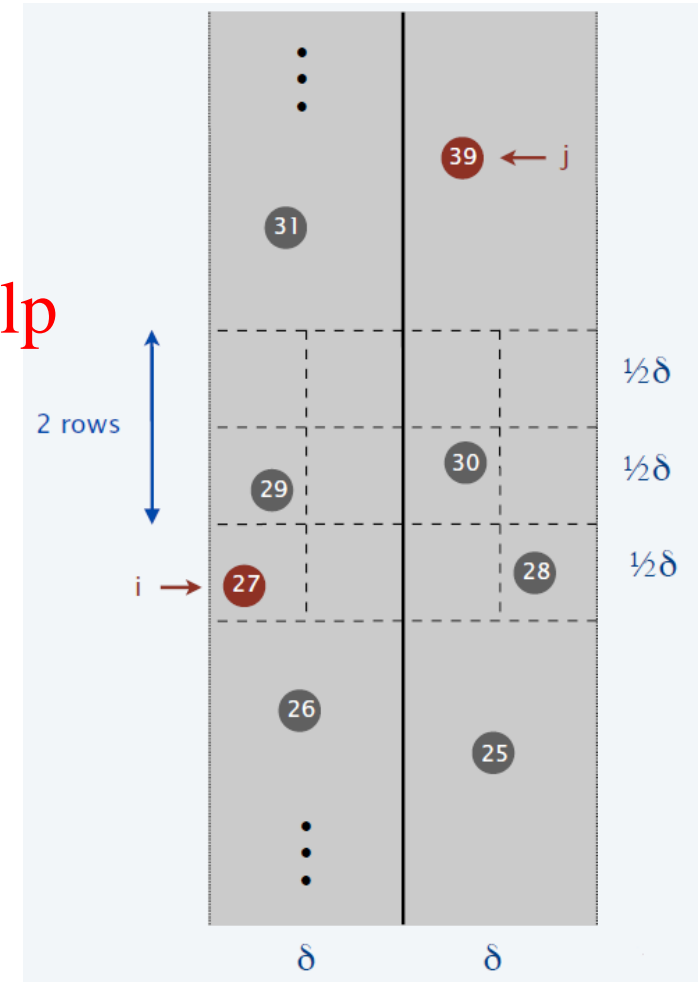

- Proof:

- No two points lie in the same $\delta/2 \times \delta/2$ box
- Two points that are more than two rows apart are at distance at least δ

Assignment Project Exam Help

- # Assignment Project Exam Help

Assignment Project Exam Help

Strassen's Algorithm

Add WeChat powcoder

- Generalizes Karatsuba's insight to design a fast algorithm for multiplying two $n \times n$ matrices

- Call n the “size” of the problem

$$\begin{bmatrix} C_{11} & C_{12} \\ C_{21} & C_{22} \end{bmatrix} = \begin{bmatrix} A_{11} & A_{12} \\ A_{21} & A_{22} \end{bmatrix} \begin{bmatrix} B_{11} & B_{12} \\ B_{21} & B_{22} \end{bmatrix}$$

- Naively, this requires 8 multiplications of size $n/2$
 - $A_{11} * B_{11}, A_{12} * B_{21}, A_{11} * B_{12}, A_{12} * B_{22}, \dots$
- Strassen's insight: replace 8 multiplications by 7
 - Running time: $T(n) = 7 T(n/2) + O(n^2) \Rightarrow T(n) = O(n^{\log_2 7})$

Assignment Project Exam Help

Strassen's Algorithm

Add WeChat powcoder

$$\begin{bmatrix} C_{11} & C_{12} \\ C_{21} & C_{22} \end{bmatrix} = \begin{bmatrix} A_{11} & A_{12} \\ A_{21} & A_{22} \end{bmatrix} * \begin{bmatrix} B_{11} & B_{12} \\ B_{21} & B_{22} \end{bmatrix}$$

assume n is
a power of 2

STRASSEN(n, A, B)

IF ($n = 1$) RETURN $A \times B$

Partition A and B into 2-by-2 block matrices.

$P_1 \leftarrow \text{STRASSEN}(n/2, A_{11}, (B_{12} - B_{22}))$

$P_2 \leftarrow \text{STRASSEN}(n/2, (A_{11} + A_{12}), B_{22})$

$P_3 \leftarrow \text{STRASSEN}(n/2, (A_{21} + A_{22}), B_{11})$

$P_4 \leftarrow \text{STRASSEN}(n/2, A_{22}, (B_{21} - B_{11}))$

$P_5 \leftarrow \text{STRASSEN}(n/2, (A_{11} + A_{22}) \times (B_{11} + B_{22}))$

$P_6 \leftarrow \text{STRASSEN}(n/2, (A_{12} - A_{22}) \times (B_{21} + B_{22}))$

$P_7 \leftarrow \text{STRASSEN}(n/2, (A_{11} - A_{21}) \times (B_{11} + B_{12}))$

$C_{11} = P_5 + P_4 - P_2 + P_6$

$C_{12} = P_1 + P_2$

$C_{21} = P_3 + P_4$

$C_{22} = P_1 + P_5 - P_3 - P_7$

RETURN C .

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

keep track of indices of submatrices
(don't copy matrix entries)

Assignment Project Exam Help

Median & Selection

Add WeChat powcoder

- Selection:

- Given array A of n comparable elements, find k th smallest
- $k = 1$ is min, $k = n$ is max, $k = \lfloor (n + 1)/2 \rfloor$ is median
- $O(n)$ is easy for min/max

Assignment Project Exam Help

- What about k -selection?

<https://powcoder.com>

- $O(nk)$ by modifying bubble sort
- $O(n \log n)$ by sorting
- $O(n + k \log n)$ using min-heap
- $O(k + n \log k)$ using max-heap

Add WeChat powcoder

- Q: What about just $O(n)$?

- A: Yes! Selection is easier than sorting.

Assignment Project Exam Help

QuickSelect

Add WeChat powcoder

- Find a pivot p
- Divide A into two sub-arrays
 - A_{less} = elements $\leq p$, A_{more} = elements $> p$
 - If $|A_{less}| \geq k$, return k th smallest in A_{less} , otherwise return $(k - |A_{less}|)$ th smallest in A_{more}

<https://powcoder.com>

Add WeChat powcoder

- Problem?
 - If pivot is close to the min or the max, then we basically get $T(n) \leq T(n - 1) + O(n)$, which only gives $T(n) = O(n^2)$
 - Want to reduce $n - 1$ to a fraction of n (like $n/2$, $5n/6$, etc)

Assignment Project Exam Help

Finding a Good Pivot

Add WeChat powcoder

- Divide n elements into $n/5$ groups of 5 each

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

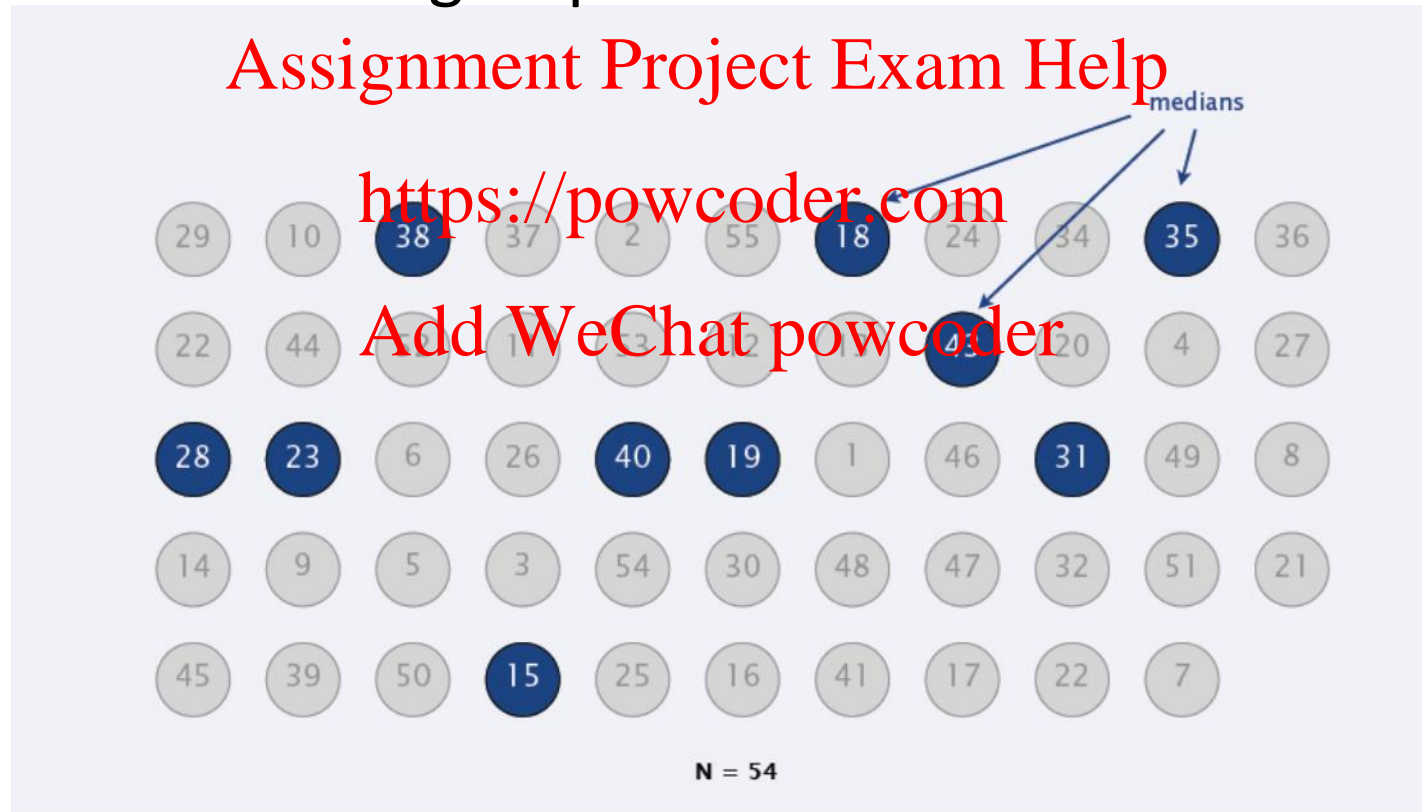

N = 54

Assignment Project Exam Help

Finding a Good Pivot

Add WeChat powcoder

- Divide n elements into $n/5$ groups of 5 each
- Find the median of each group

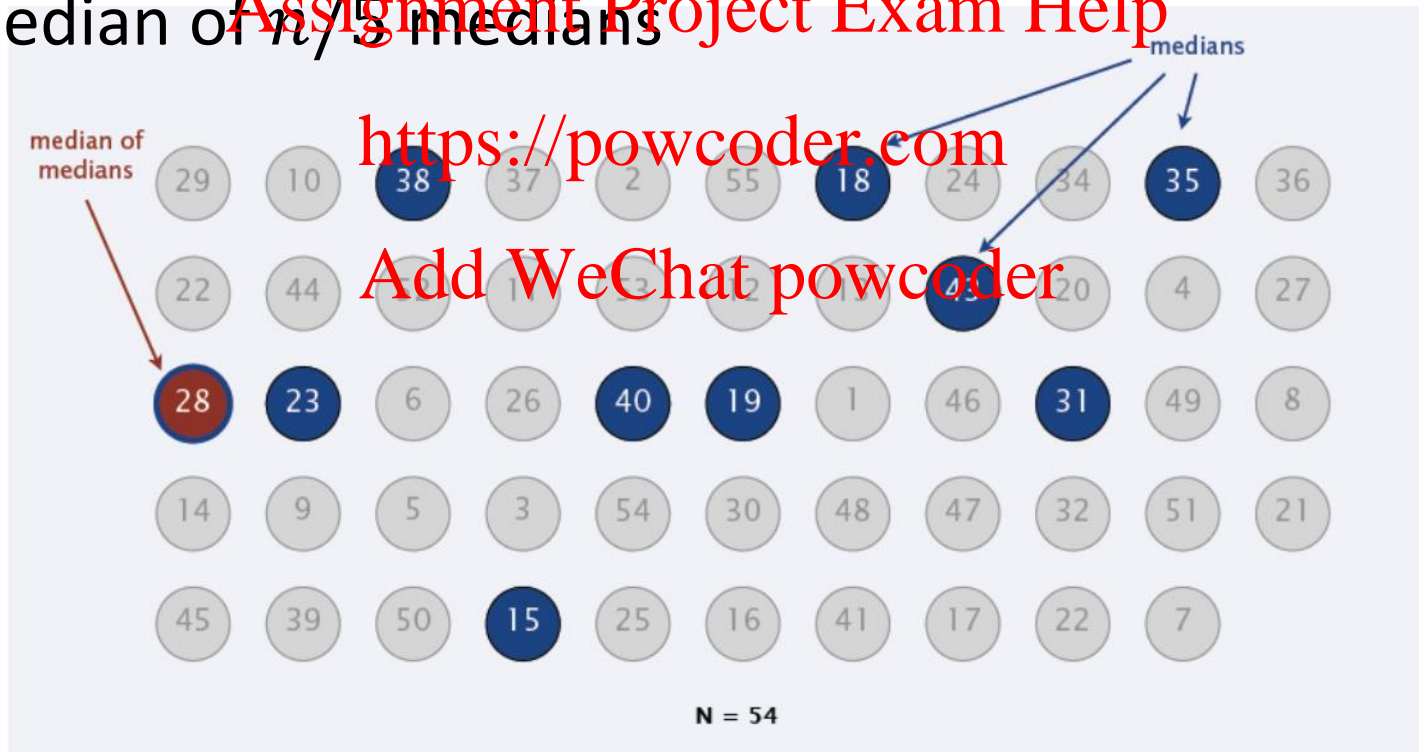

Assignment Project Exam Help

Finding a Good Pivot

Add WeChat powcoder

- Divide n elements into $n/5$ groups of 5 each
- Find the median of each group
- Find the median of $n/5$ medians

Finding a Good Pivot

Add WeChat powcoder

- Divide n elements into $n/5$ groups of 5 each
- Find the median of each group
- Find the median of $n/5$ medians
- Use this median of medians as the pivot in quickselect

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- Q: Why does this work?

Assignment Project Exam Help

Analysis

- How many elements can be $\leq p^*$?
 - Out of $n/5$ medians, $n/10$ are $> p^*$

Assignment Project Exam Help

Assignment Project Exam Help

Analysis

- How many elements can be $\leq p^*$?
 - Out of $n/5$ medians, $n/10$ are $> p^*$

Assignment Project Exam Help

Assignment Project Exam Help

Analysis

- $n/10$ of the $n/5$ medians are $\leq p^*$
 - For each such median, there are 3 elements $\leq p^*$
 - So there can be at most $7n/10$ elements that can be $> p^*$

Assignment Project Exam Help

Analysis

Add WeChat powcoder

- Thus, $|A_{more}| \leq 7^n/10$
 - Similarly, $|A_{less}| \leq 7^n/10$
 - (These are rough calculations...)

Assignment Project Exam Help

- How does this factor into overall algorithm analysis?

Add WeChat powcoder

Analysis

Add WeChat powcoder

- Divide n elements into $n/5$ groups of 5 each
- Find the median of each group
- Find p^* = median of $n/5$ medians
- Create A_{less} and A_{more} according to p^*
- Run selection on *one of* A_{less} or A_{more}

$O(n)$

$T(n/5)$

$O(n)$

$T(7n/10)$

- $T(n) \leq T(n/5) + T(7n/10) + O(n)$
- Note: $n/5 + 7n/10 = 9n/10$
 - Only a fraction of n , so by the Master theorem, $T(n) = O(n)$

- Best algorithm for a problem?
 - Typically hard to determine
 - We still don't know best algorithms for multiplying two n -digit integers or two $n \times n$ matrices
 - Integer multiplication
 - Breakthrough in March 2019: first $O(n \log n)$ time algorithm
 - It is conjectured that this is asymptotically optimal
 - Matrix multiplication
 - 1969 (Strassen): $O(n^{2.807})$
 - 1990: $O(n^{2.376})$
 - 2013: $O(n^{2.3729})$
 - 2014: $O(n^{2.3728639})$

Add WeChat powcoder

- Best algorithm for a problem?

- Usually, we design an algorithm and then analyze its running time

- Sometimes we can do the reverse:

Assignment Project Exam Help

- E.g., if you know you want an $O(n^2 \log n)$ algorithm

<https://powcoder.com>

- Master theorem suggests that you can get it by

Add WeChat powcoder

$$T(n) = 4 T(n/2) + O(n^2)$$

- So maybe you want to break your problem into 4 problems of size $n/2$ each, and then do $O(n^2)$ computation to combine

Residual Notes

Add WeChat powcoder

- Access to input

- For much of this analysis, we are assuming random access to elements of input
- So we're ignoring underlying data structures (e.g. doubly linked list, binary tree, etc.)

Assignment Project Exam Help

<https://powcoder.com>

- Machine operations

- We're only counting the number of comparison or arithmetic operations
- So we're ignoring issues like how real numbers are stored in the closest pair problem
- When we get to P vs NP, representation will matter

Residual Notes

Add WeChat powcoder

- Size of the problem

- Can be any reasonable parameter of the problem
- E.g., for matrix multiplication, we used n as the size
- But an input consists of two matrices with n^2 entries
- It doesn't matter whether we call n or n^2 the size of the problem
- The actual running time of the algorithm won't change
